Click "Able to perform all actions across the dashboard, including managing Live API Keys."

The screenshot shows a web interface for managing team members. On the left is a sidebar with navigation links: "Authentication settings", "SSO settings", "Team members" (highlighted), "Management API", and "Billing". At the top left of the main area is a button "← Back to dashboard". The main heading is "Members". To the right of the heading is a search bar "Search by email" and a "+ Invite" button. Below the heading is a table with columns "Name", "Email", and "Actions". The table is currently empty, showing "0 of 1" members. An "Invite Member" modal is open in the center. It contains three input fields: "Name (optional)" with the value "Giorgos", "Email address" with the value "giorgos2@gmail.com", and a "Role" dropdown menu. The dropdown menu is open, showing four options: "Admin", "Developer", "Support Agent", and "Support Manager". The "Admin" option is highlighted with an orange circle. The descriptions for each role are as follows:

- Admin**: Able to perform all actions across the dashboard, including managing Live API Keys.
- Developer**: Able to manage project configurations, and has write access to all core entities. Can view and create API Keys in Test, but not in Live.
- Support Agent**: Read access to project Users, Members, Organizations and event logs. Able to take non-destructive write actions on Users/Members, such as resetting passwords and revoking sessions. Default role for JIT Provisioned users if no other automatic role assignments apply.
- Support Manager**: Read access to project configurations and event logs.

## 12 Click "Invite"
